

UNDERGROUND STORAGE TANK (UST) SITE REMEDIATION

R.A.R. engineering group, inc. has prepared Site Characterization Reports, Remedial Action Plans, and managed site cleanup activities through PADEP and BUSTR approval for more than 100 properties contaminated by releases associated with Underground Storage Tanks (UST).

- USTs can contain unleaded gasoline, diesel fuel, or other potentially hazardous substances
- Leaking Underground Storage Tanks (LUST) require remedial action by the property owner that must be approved by the PADEP or BUSTR
- R.A.R. has worked with the PADEP, BUSTR and the Pennsylvania and Ohio Underground Storage Tank Insurance Funds (USTIF) for more than twenty years to clean up sites
- R.A.R. has prepared Remedial Action Plans that include: soil excavation, in-situ remediation equipment installation, "trap & treat" remediation injections, and groundwater monitoring activities.
